Fwd: Requests permission to cap the area south of the no dredge zone

Jen - CDM Smith was not onsite when they collected the cores. Ben was informed yesterday that this activity would happen on Thursday. On the RM 10.9 Status call today they said that they were doing it today at low tide, which means it had probably already happened. High tide was at about 1230 today. Ben went to the site at 1430 for the panel placement and Roy (CH2M Hill) told me that they collected some cores and took pictures.

Please see attached email. I can send you photos tonight that Roy took of the cores taken this morning after completing the manual rock removal. They'd like to start armoring that section of the removal area tomorrow.

Stan
